The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bigner.

Bigner discloses coating compositions suitable for application to boat hulls. These compositions are taught as comprising curable resins such as epoxy (col. 7, lines 37-41). These compositions are further taught as comprising fillers which may be spherical or non-spherical and may be glass (col. 6, lines 54-66). This disclosure is seen as rendering obvious the inclusion of glass powder and glass beads.

While applicants' coating method is not disclosed, the rejected claim is to a ship with a hull treated by the method. It is the position of the examiner that the coating compositions of the reference applied by the intended methods of the reference meet the limitations of the rejected claim barring a showing of patentably distinct properties necessarily flowing from the method.

Claims 1-9 are allowed.
